

CSS Background

CSS background property is used to define the background effects on element. There are 5 CSS background properties that affects the HTML elements:

1. background-color
2. background-image
3. background-repeat
4. background-attachment
5. background-position

1) CSS background-color

The background-color property is used to specify the background color of the element.

You can set the background color like this:

Example

```
<!DOCTYPE html>
<html>
  <head>
    <style>
      h6, b{
        background-color: #b0d4de;
      }
    </style>
  </head>

  <body>
    <h6>My first CSS page.</h2>
    <b>This is an example of CSS background-color.</b>
  </body>
</html>
```

output:

My first CSS page.

This is an example of CSS background-color.

2) CSS background-image

The background-image property is used to set an image as a background of an element. By default the image covers the entire element. You can set the background image for a page like this.

Example

```
<!DOCTYPE html>
<html>
  <head>
    <style>
      div#back_img {
        background-image: url("../image/html.jpg");
        font-size: 18px;
        font-weight: bold;
      }
    </style>
  </head>
```

output:

List of different programming languages are...

- JAVA
