JavaScript

Our **JavaScript Tutorial** is designed for beginners and professionals both. JavaScript is used to create client-side dynamic pages.

JavaScript is an object-based scripting language which is lightweight and cross-platform.

JavaScript is not a compiled language, but it is a translated language. The JavaScript Translator (embedded in the browser) is responsible for translating the JavaScript code for the web browser.

Application of JavaScript

JavaScript is used to create interactive websites. It is mainly used for:

- Client-side validation,

- Dynamic drop-down menus,

- Displaying date and time,

- Displaying pop-up windows and dialog boxes (like an alert dialog box, confirm dialog box and prompt dialog box),

- Displaying clocks etc.

JavaScript Example

```
<script>

document.write("Hello JavaScript ");

</script>
```
